Comments

This traceability matrix shows the relationship between the requirements for Assessment 4 and the associated Black-Box tests or Unit tests. In addition, tests which did not implicitly test a specific requirement but were still necessary to test consistent game execution have also been omitted. This matrix shows that each of the requirements specified in the Assessment 4 brief, including the changes to the requirements, have been tested by at least 1 test case (excluding REQ N6) and since all of these tests were successful, each requirement has been satisfied. Test highlighted in green signify tests that have been added specifically to test additions made in Assessment 4 to meet the full product brief requirements. From the traceability matrix we can see that all requirements have at least 1 test case apart from requirement N6. However, information and images seen at the bottom of our Black-box tests evidence explicitly show 8-bit graphics as required.
