Comments

This traceability matrix shows the relationship between the requirements for Assessment 2 and the associated Black-Box tests or Unit tests. All full product brief requirements which did not need to be satisfied in Assessment 2, and were also not implemented, have been omitted from the table. In addition, tests which did not implicitly test a specific requirement but were still necessary to test consistent game execution have also been omitted. This matrix shows that each of the requirements specified in the Assessment 2 brief have been tested by at least 1 test case and since all of these tests were successful, each requirement has been satisfied.
